THE NEW SIEVERT HOT-AIR BURNER

SIEVERT

The Sievert hot-air burner is perfect for shrink materials on cables. It is also easy to carry or clip on a belt.

The new hot-air burner has a temperature specially adapted to shrink materials. As a result, the heat is readily absorbed by the material all the way through.

Owing to its high heating effect and the directed jet of hot air, it is also effective in cold and windy conditions. Since the hot air can be directed with high precision it can be held extremely close to the material.

You can easily hold the workpiece in your hand – without getting burnt. A big advantage on many jobs. Since it has no naked flame it is also ideal in confined spaces where it is otherwise easy to set fire to or damage delicate materials.

2957

2958

2959

2956

SPECIAL BURNER FOR SHRINK MATERIALS

A new line of Sievert burners – specially developed for heating shrink tubing.

Sievert hot-air burners and soft-flame burners have been developed in cooperation with leading users and manufacturers of shrink materials. They are suitable for all types of jobs from small shrink tubes to wrap-around sleeves for large-diameter steel pipes.
